

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1-40. (Canceled)

41. (Currently Amended) An apparatus for manufacturing a color filter, comprising:

a plurality of nozzles for ejecting a filter material in droplets; and  
a plurality of heads, each head having the plurality of nozzles linearly arranged with a constant layout pitch of (D), the plurality of heads are arranged to form only a single linear row of nozzles.

42. (Currently Amended) An apparatus for manufacturing an electroluminescence substrate, comprising:

a plurality of nozzles for ejecting a filter material in droplets; and  
a plurality of heads, each head having the plurality of nozzles linearly arranged with a constant layout pitch of (D), the plurality of heads are arranged to form only a single linear row of nozzles.

43. (Currently Amended) A method for manufacturing a color filter, comprising:  
scanning a substrate by moving a table and a plurality of heads; and  
ejecting a filter material in droplets by a plurality of heads, each head having a plurality of nozzles arranged with a constant layout pitch of (D), the plurality of heads are linearly arranged to form only a single linear row of nozzles.

44. (Currently Amended) A method for manufacturing an electroluminescence substrate, comprising:

scanning a substrate by moving a table and a plurality of heads; and

ejecting a functional layer forming material in droplets by a plurality of heads, each head having a plurality of nozzles arranged with a constant layout pitch of (D), the plurality of heads are linearly arranged to form only a single linear row of nozzles.
